

**The Southwards Pursuit of Senegal's Success:
MATURE PETROLEUM SYSTEM(S) DEFINED
IN THE GUINEA MARGINAL PLATEAU
(GUINEA-BISSAU AND GUINEA)
Supplemental report**

FEC has the presence of a regional Middle to Lower Jurassic, oil-prone kitchen predicted in our newly completed PETROLEUM SYSTEM(S) study on the Guinea Marginal Plateau. This was defined using seismic, basin modeling and direct oil seep evidence. To obtain direct detection evidence of this prediction, FEC have teamed up with TDI-Brooks International, Inc. to include the full findings from their **"2001 Guinea-Bissau Sub-Seabed Exploration Consortium Program"** underpinning our other direct hard data and modeling evidence all predicting the presence of these additional mature Type 1 Source Rocks.

The Study Area. The TDI-Brooks geochemical sites are the green circles.

TDI-Brooks International, Inc.

"Providing Scientific Services On A Global Basis"

The results will be available in July 2018. Access to this crucial study will require the purchase the underlying main GMP MSGBC 2018 Petroleum System Study that was published June 2018.
